

Deep Cleaning Filter Trolley

Norton Fluid Power supply a range of products and services to ensure hydraulic systems run reliably. Cleanliness is an important consideration for hydraulics with most system failures being attributable to contamination.

This filter trolley can be used for cleaning hydraulic fluid in reservoirs or barrels. The fine filters fitted are very effective at removing very small particles (sub 4-micron) from hydraulic oils. The low pump flow ensures steady fluid velocities, which improves the filtration efficiency.

Technical Specification

Electrical Supply: 110 V AC single phase, maximum current 6.1 amps.

Hydraulic: 5/8" suction hose, 3/8" pressure hose. Maximum pressure 2 Bar. Fitted with 1 μ m filters.

Trolley Reference: NFP-FC01/RMF
