

NORTON

FLUID POWER

WANT RELIABILITY OF DATA?

Reliability of your Servo Test Machines are critical to maintain the quality of the test data, saving unnecessary potential workplace accidents, retesting and costly downtime.

This is where Servo Test Machine Services can really come in handy. Norton Fluid Power can support you with established digital control systems from our dedicated business unit. Servocon, providing a cost effective solution. Also providing hydraulic system repairs and servicing.

The data from the Servocon system is for the test machine user to have in real time, to verify the product being tested is correct. The data can be used in the future for comparison reports. The Servocon controller also controls the machine quickly and accurately to the parameters set in the computer, in addition it will take readings of how much the product has been tensile or load tested, up until failure, recording the necessary information.

WHAT IS SERVOCON?

Servocon manufacture an established Digital Electronic Controller for Servo Test Machines. Servocon can be used to replace controllers from MTS, Instron and Zwick Roell, improving both accuracy and reliability. Servocon controllers are a cost effective and reliable replacement on any Servo Test Machine.

A new control system can be designed from first principles, the software being written and the controller programmed. On site, the system is wired to the existing machine and commissioning follows. In addition, we can also calibrate the test machine, providing a full and traceable service.

NORTON
FLUID POWER

HYDRAULIC SERVICES FOR SERVO TEST RIGS

Servo Actuator Repair

Norton Fluid Power are an established name in hydraulics and have many year's experience of overhauling test machine cylinders and also providing modifications to improve performance and operational life

Servovalves

Product quality is important to Norton Fluid Power, as such we choose product brands that offer quality and Value. We have a close working relationship with Star Hydraulics and can offer new valves or a repaired valve with Star's patented Sapphire technology that improves valve reliability.

Hydraulic Accumulators

Accumulators need maintenance to check nitrogen pressure and require inspection at predetermined intervals to meet the Pressure Equipment Directive. Norton Fluid Power can assist with maintenance, accumulator inspection and the supply of new accumulators.

Hydraulic Services

The hydraulic services, ensure the hydraulic system is maintained professionally, reducing the risk of unexpected breakdown. The services we provide are; oil analysis, filter replacement, hose replacement and upgrade, pump pressure and flow checks.
